Thank You

Thanks of purchasing and downloading our Lightroom Presets. Hope you will enjoy them as much as we have!
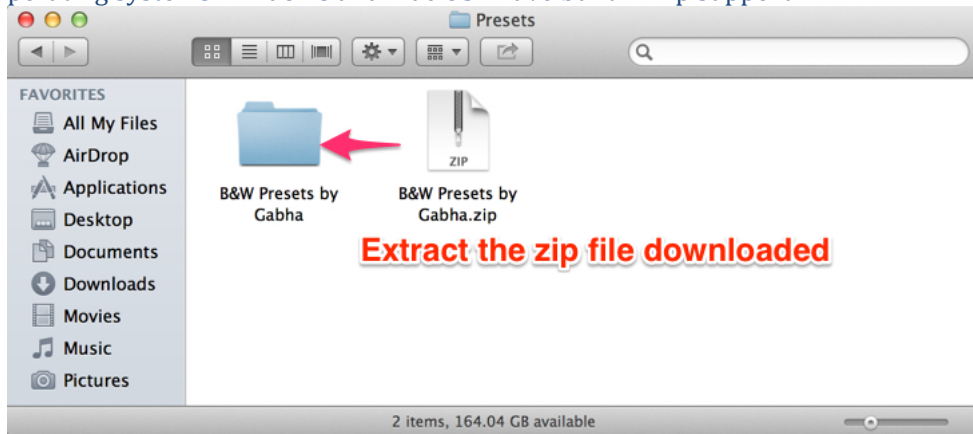

Next step is to install these Presets in Lightroom, so follow the steps below to Install the Presets
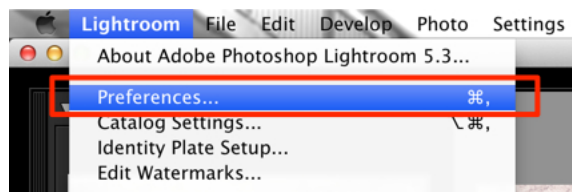

Installation Steps
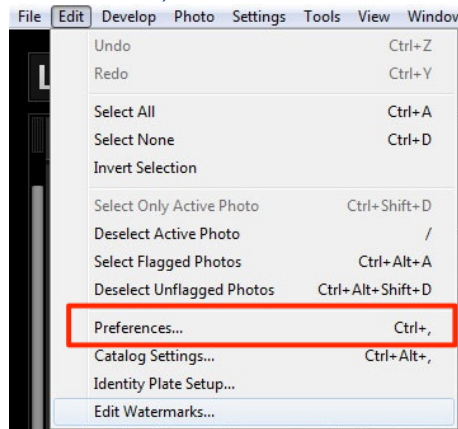

Follow the simple steps below to install the presets.

1. After you've downloaded the files from link provided in your email. Unzip the files using your favourite Zip application eg. Winzip, 7-Zip etc. However most latest Operating systems Windows and Mac OSX have built-in zip support.

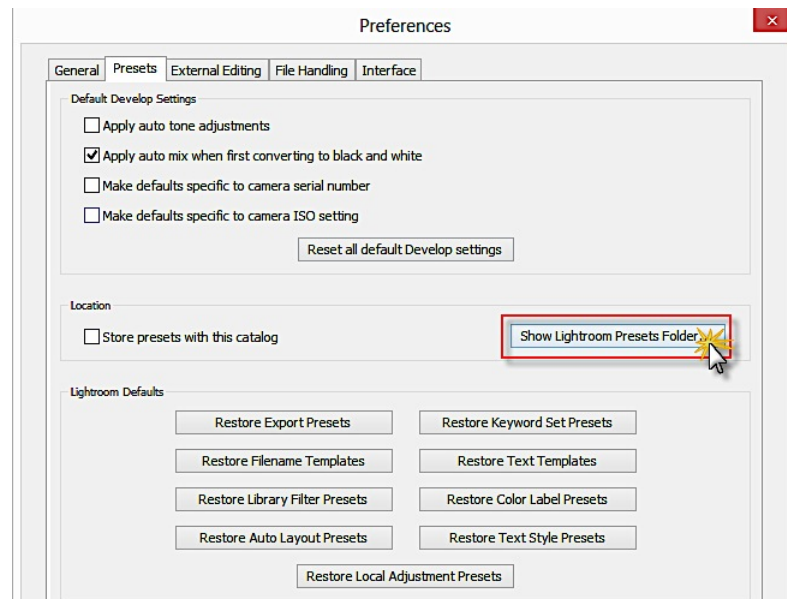

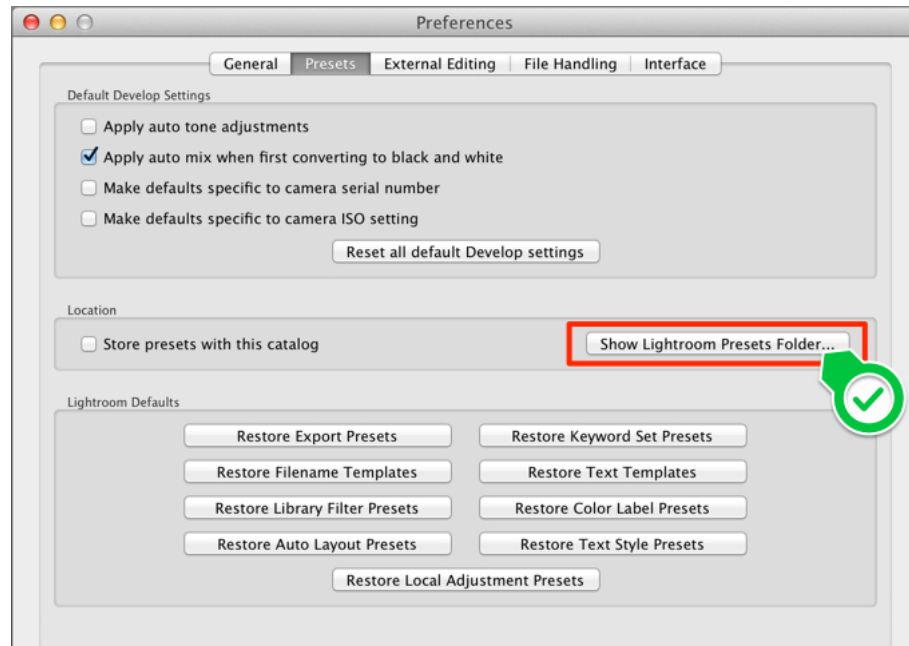

2. Launch Lightroom on your computer and open up the Preferences panel.
   a. On Mac OSX, click on the Lightroom menu and select Preferences.

   b. On Windows, click on the Edit Menu and select Preferences.
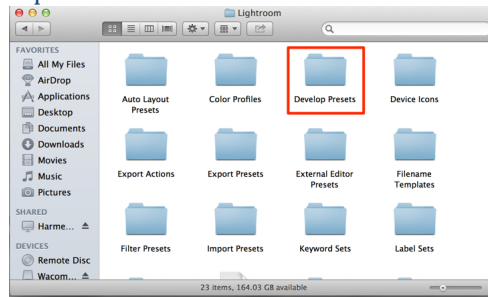

3. Select the Presets tab and click on "Show Lightroom Presets Folder" button.
   IMPORTANT: Exit/Close Lightroom completely after this step.

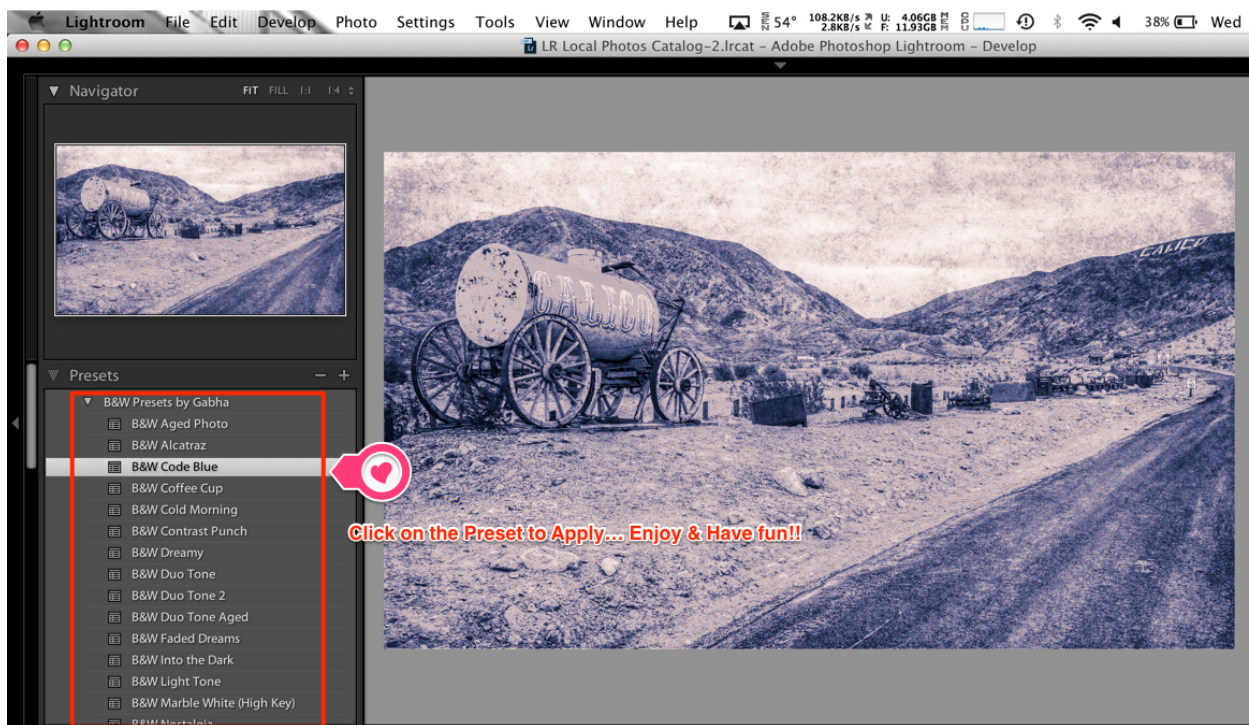

4. Double Click on the "Lightroom" folder.

5. Double Click on "Develop Presets" folder.

6. Copy the extracted folder (from the zip file) into the Develop Presets folder.

7. You are now done. Launch/Open Lightroom again and switch to the Develop Module. Your Presets are now ready for use, enjoy!!

Troubleshooting

In case you have difficulty installing the Presets here are few things to check before you contact us for support.

- ✓ Check that the folder extracted from the ZIP file (downloaded from the link) contains some files that have '.lrtemplate'. These are the actual presets, if you don't find these files, delete the ZIP file and download it again from the link found in your email.
- ✓ Make sure you closed Lightroom at Step 3, if you missed this part and can't find the Presets in Lightroom. Simple close/exit Lightroom and open/launch it again.
- ✓ Still can't install the presets, contact us.

Contact Us

We'd love to hear your feedback on the Presets, please leave us a comment on the GPS site or email us at feedback@gabha.photography. If you need help installing the Presets, you can contact us at support@gabha.photography.
