# How to install Lightroom presets:
/////////////////////////
Installation is easy, just follow the steps:

People, who use Adobe Photoshop, must be very well known about the **lightroom
presets** and its significance too. Below given are some easy and convenient steps that
will tell you on **how to install lightroom presets**:

1. Download the 7-Zip for Windows from the link (http://www.7-zip.org/download.html)
   and Mac OS from the link (http://www.macupdate.com/app/mac/19139/ez7z)
2. 2. Download the presets link in the email you will receive after your purchase.
3. Extract the 430 Presets Bundle.zip in the desktop and put the presets into the folder of
   your   choice.
4. In this folder you will find the all presets, they are the files with the .lrtemplate
   extension.
5. At first in Adobe Photoshop, open the lightroom and click on the option on preferences
   after.

6. Browse down the preferences and click on it.
7. A new screen will pull up containing six tabs at the top. Click on the second tab named as presets.

8. There is box titled as 'Show lightroom presets folder'
9. Further, double click on the 'lightroom'

10. A folder titled as 'develop presets folder' will be displayed, double click on that.
11. Afterwards, copy all the contents of folder containing the files with extension **.lrtemplates** that you have download in the 'develop presets folder'.

12. At last, the lightroom presets are installed successfully. In case, the lightroom was opened while copying the presets, just close the same and restart it.

Hence, these are the steps to teach **how to install lightroom presets**. The process is same for **Adobe Lightroom 4**, **Adobe Lightroom 5,** and **Adobe Lightroom CC.**

Thank you so much for the purchase
